Finite Automaton that accepts only those words that do not end in ba	

Source Code

Paragraphs have a single line break between them.

You can include source code.

• A Go code block:

```
import "fmt"

// the main function
func main() {
   fmt.Println("Hello, word! →⇒ ≤ ≥ ≠")
}
```

Math Equations

$$x_{1,2} = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

$$\left[\begin{array}{cc|c} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{array}\right]$$

$$y = \begin{cases} x+3 & \text{if } x \ge 20\\ \frac{\sin^2\left(\sqrt[43]{e^x + \cos(x)}\right)}{\ln(x-3)} & \text{if } x \ne 90 \end{cases}$$

Lists

- 1. First
 - a. nested first
 - i. nested second
 - A. forth
- 2. Second
- 3. First
 - a. nested first
 - i. nested second
 - A. forth
- 4. Second

- \bullet first
 - \circ second
 - \blacksquare third
 - * forth

Diagrams

• A TikZ diagram:

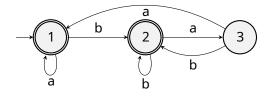

Figure 1: Finite Automaton that accepts only those words that ${f do}$ not end in ba

• A Karnaugh map:

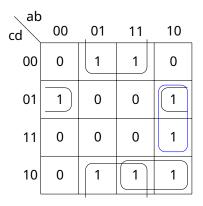

Figure 2: A Karnaugh map
